FACULTY INFORMATION

Name, Title	Prof. Dr. Gui Liberali, Professor of Digital Marketing, RSM
Email address	liberali@rsm.nl
LinkedIn/RSM profile	https://www.linkedin.com/in/gui-liberali/guiliberali.org
Phone number	-
Preferred contact/Office hours (if applicable)	After class, or by appointment when necessary (and subject to availability during the teaching period)
Canvas course link	<i>TBD</i>

FACULTY BIO

Prof. Liberali develops AI methods, from prediction and generation to reinforcement learning and agentic systems, that make and shape human decisions and govern high-stakes actions under constraints of control, auditability, safety, and regulatory compliance. This includes a diverse range of topics, including online advertising, website design, online experimentation and clinical trials.

Gui is the Full Professor of Digital Marketing at Rotterdam School of Management at Erasmus University. He is an Associate Editor at Marketing Science, an Area Editor at the IJRM, member of the editorial board at JMR, a guest editor at Management Science, and a finalist of the *INFORMS Society for Marketing Science Long Term Impact Award* and of the *John Little Award*. Gui is also a member of advisory boards of high-tech startup companies. Gui is the co-founder of the Erasmus Centre for Optimization of Digital Experiments (www.erim.eur.nl/ecode), the Business Data Science graduate school (www.businessdatascience.nl), the [Business Analytics Masters](#), and the Erasmus Center for Data Analytics (www.ecda.eur.nl).

ABSTRACT

In recent years, the popularization of AI and machine learning (ML) led to major changes in society. Large language models (LLMs), multi-armed bandits, generative AI and other developments are dramatically altering how consumers obtain information and how they relate with companies and organizations. For example, AI and ML lowered costs for *tracking* (e.g., monitoring consumer activity across different companies, locations and domains), *search* (e.g., searching for information on products and companies), and *content generation* (e.g., ChatGPT, social media messages and news articles).

In marketing, the impact of AI and ML was both deep and wide, offering a multitude of benefits such as personalized targeting, dynamic ad optimization, improved ad relevance, automated ad creation, enhanced ad placement, predictive analytics, fraud detection, and optimized budget allocation. Through sophisticated algorithms analyzing vast datasets, advertisers can target specific demographics with tailored ads, optimize campaigns in real-time, predict future trends, detect fraudulent activity, and allocate resources efficiently. This transformative impact enables advertisers to reach their target audience more effectively, drive higher engagement and conversion rates, and maximize return on investment.

Such landscape changes did not come without problems: privacy, biases, misinformation and 'fake news' became household terms and concerns. Privacy concerns have escalated as personal data is increasingly utilized for targeted advertising, raising questions about data security and consumer consent. Additionally, biases embedded within algorithms can perpetuate inequalities and discrimination, leading to ethical dilemmas in ad targeting and content recommendation. Furthermore, the proliferation of misinformation and 'fake news' has become a pressing issue, exacerbated by the rapid dissemination of content through AI-powered recommendation systems. These challenges underscore the importance of ethical considerations and regulatory frameworks to address the negative implications of AI and ML in advertising while harnessing their transformative potential responsibly.

In this course, we explore these opportunities and challenges, examining the transformative effects of AI on marketing, with an emphasis on advertising. We explore the myriad ways AI and ML contribute to value creation in marketing. Four main themes structure our discussions: digital and technological *trends*, *applications* of machine learning in marketing, the *impact* of AI on measurement, ad creation, targeting, and placement, and the *ethical* complexities surrounding targeting and algorithmic biases in ML models.

EDUCATIONAL GOALS

At the end of this course, you will:

Learning areas	
I. Content- related	Become familiar with contemporary, up-to-date digital and technological <i>trends</i> and applications of machine learning for marketing.
	Analyze the structure, implications, challenges, and opportunities <i>enabled by</i> machine learning and AI in marketing in general, and online advertising in particular including measurement, ad creation targeting and placement
	Evaluate the <i>issues</i> of targeting and algorithmic biases in ML model
II. Skills-related	Learn and apply new quantitative skills in order to achieve the preceding objectives
III. Attitude-related	Evaluate the current landscape of marketing practice, identify AI trends that are relevant to marketers, and present your findings to others

FIT WITHIN THE RSM ERASMUS MBA AND RELATION TO THE RSM MISSION: A FORCE FOR POSITIVE CHANGE*

This course provides students with competencies to be a force for positive change when leading AI-driven change projects. The course prepares students to navigate issues that relate to AI and machine learning in advertising, while learning how to avoid biases and discrimination arising from such technologies.

* It's RSM's mission to be a force for positive change in the world. For this, RSM is committed to the United Nation's [17 Sustainable Development Goals](#) as the framework for defining 'positive change'. For the purpose of the RSM Erasmus MBA, we strive to provide our students with the opportunity to master competencies that enable them to successfully lead teams, business units and organizations while they navigate and accelerate transitions towards more just, sustainable and resilient societies. We report the amount of lecture time across all of our MBA courses that is devoted directly to such mission-relevant learning. We have further broken this down into environment, social, and governance related topics.

TEACHING METHODS AND WORKLOAD

Most modules follow a similar pattern:

- Prior to the class session, students read assigned articles and cases, and complete assignments to assess their comprehension of the material. Students can post questions and discuss material through the course discussion board.
- During the class session, the instructor guides discussion about the assigned material, helps students obtain new insights, and further elaborates on new concepts and tools.

The student research presentations allow groups of students to conduct research about important trends affecting customers and/or marketers. Students work on these throughout the course and present their findings during the last two sessions.

The expected workload for each course component is shown below.

Description	Calculation	Total
In-Class sessions:	10 x 3 hours	30 hours
Module preparation/assignments (8)	8 x 6 hours	48 hours
Research presentation		34 hours
Total Course Hours		112 hours
EC (4)	4 EC x 28 hours	112 hours

GRADING AND ASSESSMENT

Course: Advanced Marketing: Marketing & AI	Assessment formats		
Educational goals per course	Research Presentation	Two Module Assignments	Total
Become familiar with contemporary, up-to-date digital and technological trends and applications of machine learning for marketing.	X		
Analyze the structure, implications, challenges, and opportunities enabled by machine learning and AI in marketing and online advertising including measurement, ad creation targeting and placement		X	
Evaluate the issues of targeting and algorithmic biases in ML model, leading to a more fair and just world		X	
Learn and apply new quantitative skills in order to achieve the preceding objectives		X	
Evaluate the current landscape of marketing practice, identify AI trends that are relevant to marketers, and present your findings to others	X		
Weighting factor	45%	55%	100%
Minimum grade required	5.5	5.5	5.5
When failed, resit option within academic year	Yes	Yes	
Form of examination	Presentation	Report	
Group / Individual assessment (Group/Individual)	Group	Individual	

In order to pass the course, each assessment or deliverable (component grade) with a resit option, needs to be at least 5.5. Components with no resit option bear no minimum grade required, but to pass the overall course, the final grade needs to be at least 5.5.

Grades are rounded according to the rounding provisions included in the Teaching and Examination Regulations (TER) of the programme, and are expressed with 1 decimal point. Not meeting the minimum grade required for either a component grade or the overall course grade determines a fail for the course. Participants can resit a failed component only once. There is no capping of the grade for a resit examination. The only exception is when the nature of the failed assignment allows for an improvement effort of the same assignment (capped at 5.5 for that component).

For this particular course, the faculty has decided that all assignments allow for new resit with new instructions.

Grade penalties for unauthorized late submissions will be automatically imposed. Penalties for unauthorised late submissions range from 10% to 20% deduction from the examination component depending on the hours/days late. Unauthorised late submissions 4 days or longer after the deadline without prior notification and a reasonable explanation for the late submission, will not be accepted. For the Two Module assignments it is not possible to submit at a later date, because the cases will be discussed in class. Failing to submit timely means that the submission will no longer be accepted and result in a fail.

Attendance is mandatory and a requirement to pass the course. Missing classes and arriving late may result in grading penalties and even a fail for the course.

Fraud, Plagiarism / Self-plagiarism (Refer to separate RSM Code of Conduct, Rules and Guidelines, and Teaching and Examination Regulations)

The Examination Board defines fraud as *“the action or negligence of a student because of which it is impossible, entirely, or partially, to form a correct judgment about the knowledge, insight, and skills of them or another student”* (R&Gs and TERs). Examples of fraud are cheating, cribbing, plagiarism, freeriding in a team assignment, availability of unauthorized (study) material during a test such as mobile phones, contract cheating/outsourcing/ghost-writing, unauthorized use of generative AI, identity fraud, theft.

Confirmed cases of fraud/plagiarism will lead to (appropriate and proportional) sanctions as defined by the Examination Board in the Rules and Guidelines (R&G). Repetitive cases of fraud/plagiarism lead to expulsion from the programme.

Plagiarism is presenting another person’s work as one’s own. Plagiarism includes any paraphrasing or summarising of the work of another person or group without acknowledgment, including submission of another student’s work as one’s own. Plagiarism frequently involves a failure to acknowledge the quotation of paragraphs, sentences, or even a few phrases written or spoken by someone else.

Using ideas from your own prior work (assignment) without referencing the work in your assignment is considered self-plagiarism.

Participants are required to adhere to the 6 principles outlined in the RSM AI guidelines with regard to the use of Artificial Intelligence Platforms such as ChatGPT and related software/tools. The unauthorised use constitutes violation of plagiarism/ fraud policy. For this particular course, the faculty promotes a *“restrained”* use of AI.

For more information about academic integrity and AI please refer to the Programme’s Teaching and Examination Regulations and RSM AI guidelines documents on the [Student Hub](#) (Link).

Cases. In this course, we will be using a few cases: Amperity, Budlight, Private Data, Rocket Fuel, and Travelogo. Two of these (Travelogo and Private Data) are graded and make up 55% of the final grade. You are required to pass these two. The other cases (Amperity, Budlight and RocketFuel) are for pre-reading and preparation. The preparation questions are at the end of this guide. You are required to read them and be ready for direct cold calls and for detailed and extensive discussions during class.

Work package	Individual or group:	(Due) date and hand in on Canvas	% of final grade:
Pre-reading	group	- Amperity: Session 3 - Budlight: Session 4 - Rocketfuel Session 5	-
Two Module assignments	Individual	Based on the questions received during class: - Travelogo: session 1 - Private Data: Friend of Foe: session 6	55 %
Research presentation	Group	Session 10	45 %

For all Canvas submissions, please make sure to include the student name, EUR student number, and programme name within the document itself (on the cover page), and your initials, EUR student number, and programme name in the title of the file submission

REQUIRED TEXTBOOK(S) AND READINGS

Cases

- Travelogo
- Amperity
- Private Data: Friend of Foe?
- Budlight
- Rocket Fuel

Articles

- Please refer to the detailed course schedule below.

Optional reading (general)

- Hund, 2024. Why the Influencer Industry Needs Guardrails. S243031
- Hwang, Zhang, Liu and Srninivasan, 2024
- Lemon, K. N., & Verhoef, P. C. (2016). Understanding Customer Experience Throughout the Customer Journey. *Journal of Marketing*, 80(6), 69-96. <https://doi.org/10.1509/jm.15.0420>
- Jerath and Savary, 2017. A Primer on Programmatic Advertising (CU180-PDF-ENG)
- Verhoelf et al., 2022 (Omnichannel Retailing: a Consumer Perspective)
- When and How to Create Customer Journey Maps. Kate Kaplan. Jul 31, 2016. <https://www.nngroup.com/articles/customer-journey-mapping/>
- Kruppa, M., & Haggin, P. (2024, January 5). Ad Firms Fret as Google Removes Cookies - Critics say sector isn't ready for the user-tracking tech to be phased out. Wall Street Journal.
- Maksim. (2024). No more cookies? Google ending third-party cookies in Chrome. Cookiebot. <https://www.cookiebot.com/en/google-third-party-cookies/>

Optional reading (only for the technically curious minds)

- Duncan Simester, Artem Timoshenko, Spyros I. Zoumpoulis (2020) Targeting Prospective Customers: Robustness of Machine- Learning Methods to Typical Data Challenges. *Management Science* 66(6):2495-2522. <https://doi.org/10.1287/mnsc.2019.3308>
- Garrett A. Johnson (2023) Inferno: A guide to field experiments in online display advertising. *Journal of Economics & Management Strategy*, 32(3): 469-490
- Inefficiencies in Digital Advertising Markets. Brett Gordon et al. 2021. *Journal of Marketing* 85(1):7-25. <https://journals.sagepub.com/doi/10.1177/0022242920913236>

DETAILED COURSE SCHEDULE

A. Consumers, machine learning and advertising

B. Targeting and AI

- The wonders of targeting, testing, consumer learning and placement with AI at scale
- The dark side of targeting: biases, polarization and misinformation driven by AI

C. Ad creation: re-inventing the creative process

D. Ad measurement and attribution

E. Agentic AI: from generation to delegation

F. The soul of machine learning: a consumer perspective

G. Entrepreneurship in an AI-powered advertising world

H. The emerging marketing landscape

Session 0: Before the start of the course

Pre-reading only for students without a background in marketing

Readings:	• Gaining Deeper Insights into Customers. Mu Hu. 2019. BEP510-PDF-ENG • Fahy, J., & Jobber, D. (2015). Foundations of marketing (7th ed.). McGraw-Hill Education. Selected chapters, check with the lecturer
-----------	---

Session 1: 3 September 2026

Topics:	Course introduction; consumers, machine learning and advertising
In class exercises:	Lecture, case, discussion of assigned readings
Readings:	• Ascarza et al., 2021 (Why aren't you getting more from your Marketing AI) • Germain, 2024 (Google Just Updated its Algorithm...) • Davenport, Guha, Grewal., 2021 (How to design an AI marketing strategy) • Court et al. (2009) (The consumer decision journey)
Case:	Travelogo

Session 2: 3 September 2026

Topics:	Agentic AI and marketing: From Generation to Delegation
In class exercises:	Lecture and article discussion
Readings:	• https://www.anthropic.com/research/agentic-misalignment • https://www.weforum.org/stories/2025/12/ai-agents-onboarding-governance/?utm_source=chatgpt.com

Session 3: 15 September 2026	
Topics:	The wonders of targeting and placement with AI: experimentation and learning at scale
In class exercises:	Lecture, case and article discussion
Readings:	• Campbell et al., 2022 (It's Time to Close the Experimentation Gap in Advertising..) • Glomb, 2021 (Say Goodbye to Cookies) • CMT (The rise of AI on Advertising)
Case:	Amperity

Session 4: 16 September 2026	
Topics:	Ad creation and AI : LLMs and AGI
In class exercises:	Lecture, case and article discussion
Readings:	• Ellis et al., 2024 (A technical note on Generative Art) • Gvirtz and Acar, 2024 (Why Text-to-Image AI Requires a New Branding Mindset) • Davenport and Mittal, 2022 (How Generative AI is Changing Creative Work)
Case:	BudLight

Session 5: 17 September 2026	
Topics:	Measurement and attribution
In class exercises:	Lecture, case and article discussion
Readings:	Snippets on attribution: • https://www.ama.org/multitouch-attribution-in-the-customer-purchase-journey/ • https://www.business2community.com/consumer-marketing/attribution-101-understanding-correlation-causation-attribution-01303477#SuP0Z1FUQeLUiLwX.97 • https://ppcgeeks.co.uk/analytics/conversion-attribution-models-in-google-ads/
Case:	Rocket Fuel

Session 6: 17 September 2026	
Topics:	The dark side of targeting: bias, misinformation and polarization
In class exercises:	Article discussion. Exercise to become familiar with the issues derived from targeting and how to guardrail algorithmic recommendation for a safer world
Readings:	- Higginbotham et al., 2020 (Designing AI for All: A Primer on Bias in AI Systems) - Townson, 2023 (Manage AI Bias Instead of Trying to Eliminate It) - PIngitore et al. , 2013 (report on consumer privacy)
Case:	Case: Private Data: Friend or Foe? No prep work required.

Session 7: 22 September 2026	
Topics:	The soul of machine learning: a consumer perspective
In class exercises:	Lecture, case and article discussion
Readings:	- Taite, 2024 (How One Marketing Team Made AI Part of its Daily Work) - Liberali, 2014 (Morphing Advertising to Improve Online Campaign Success) - Proserpio et al.2020 (Soul and Machine Learning)
Case:	Data provided by the lecturer.

Session 8: 22 September 2026	
Topics:	Entrepreneurship in an AI-powered advertising world
	Willem Blom, CEMS alumni (speaking at 11:00) - Founded Expand Online (that merged with Dept) in Kratingen, next to the university with 2 fellow RSM/EUR alumni - Rotterdam Entrepreneur. Born in Rotterdam, went to high school in R'dam, then Erasmus, lived in the city for 18 years. - Engaged with several sustainability initiatives, like JustDiggIt (advisory board member). - Pledged to donate a % of the values of my shares in Dept to charity as a member of Founders Pledge - I invest in agtech companies that are developing meat/dairy successors, like Meatable (clean meat company from Delft)

Session 9: 24 September 2026	
Topics:	Emerging marketing landscape
In class exercises:	Coaching
Readings:	The Future of Generative AI

Session 10: 24 September 2026	
Topics:	Emerging marketing landscape and course wrap-up
In class exercises:	Student research presentations with internal discussants

ASSIGNMENTS DESCRIPTION

Module Assignments: Cases – Instructions

“Advertising is paid, owned, and earned mediated communication, activated by an identifiable brand and intent on persuading the consumer to make some cognitive, affective or behavioral change, now or in the future.” (Kerr and Richards, 2021)

This is a set of instructions and information to clarify expectations and procedures regarding the cases in our Advertising and AI course. Please make sure that, before each class, you thoroughly read its case, and use the two online apps.

Case: Travelogo

This is a foundational case that we will use to establish a common ground on the state-of-the-art segmentation using ML. This will enable our forthcoming discussions on target-based AI, AI-enabled advertising, and others.

Task: Please access the dashboard at https://eascarza.shinyapps.io/travelogo_dashboard/ and develop your solution to the questions you will receive during class.

Case: Private Data: Friend of Foe?

This is a case based on our own research that increases awareness to unintentionally societal negative effects of privacy regulation on consumers.

Task to be done in class: Please use the app we developed, available at r.erim.eur.nl/r-apps/grocer-e/, to answer the questions you will receive during class.

No prior reading is required for this case. This is a short case written by me, which you will work in class.

Research Presentation

The **main** objective of this assignment is to provide you with the opportunity to practice a few things:

- Identifying new trends in marketing practice
- Understanding their implications
- Disseminating this knowledge within your organization

A secondary objective is for you to teach your colleagues (including the instructor) something interesting, and to learn from the other student groups.

Overview

The idea behind this assignment is the following: If you want your organization to change for the better, you need to present your ideas to people inside the organization in a way that changes how they see things. When this happens, you create value for the organization. And when you create value within your organization, you not only help the organization, you yourself also become more valuable to the organization.

Developing brief presentations about current trends in marketing is an easy way to educate your colleagues and develop a reputation as someone who is knowledgeable about the current business landscape. These presentations can be given informally within your organization (e.g., during lunchtime); or outside the organization at industry meet-ups.

What to do

- Choose a topic (see discussion below)
- Develop a presentation that will last 30 minutes, including discussion and questions from the audience. You have total freedom for how you organize the session. You can present first and take questions later, or you can take questions during the presentation if you prefer.
- As part of the presentation, develop a slide deck. You will need to submit the presentation in PDF format, so be sure you know how to generate a PDF version of your slides before you try to turn your deck in. There are no requirements for the number of slides, or what goes on them. Your goal is to communicate effectively with your audience, and there are many ways to accomplish that.
- Teams will deliver their presentations on the last day of class.
- After each team has presented, you will rate their presentation and provide (constructive) feedback on what went well and what they could improve on.

Assessment

Your grade will be a subjective mix of 1) what I thought of your presentation, and 2) what the other students thought of your presentation. In my experience, these are usually in agreement with each other. However, if there is a major difference, I usually err on the side of the higher of the two assessments. If the student ratings are uninformative (e.g., everybody gives everybody else maximum points), then I will just use my own judgement.

In very broad terms, there are four things I look for when grading these presentations:

- How relevant (interesting and useful) is the topic for a general marketing audience. Would they feel like their time was well spent if they attended this presentation? Is the topic relevant to their job in some way (perhaps choices they will face in the future)?
- How well has your team communicated the topic to the audience? Is the presentation well organized? Are the main points clear? Is it easy to see what is on the slides? Is the material presented in a clear and engaging way?

- How well do you seem to understand the topic you are presenting? Does your understanding seem superficial (e.g., are there many buzzwords but no real substance to the presentation)? Have you managed to develop a degree of expertise in the topic? Is it clear that you understand something special, and so the rest of us can learn something from you?
- In a very general sense, was this an effective the presentation?

Each of these points receives about equal weighting in my assessment, and the peer feedback is structured to generate a similar weighting from the other students.

I expect your group to share the work equitably, but there is no requirement about how many of you present. If you want to have one person do all the talking, that's OK. But having said that, I want to encourage your group to participate in some way during the presentation, for example, answering questions from the audience.

Topic

Your topic should be something related to advertising, potentially that can benefit from artificial intelligence. It can be a current trend in the way things are done, a social phenomenon relevant to how firms communicate or relate with consumers, new government regulations, or anything else you can think of. The point here is to choose a topic that the rest of the class is not likely to know a lot about, and to teach them about it. Ideally, your topic should be interesting to a general marketing audience (and in particular, this marketing audience of MBA's and the instructor).

Rather than give you examples of topics (which I worry would lead you to anchor too strongly on those particular examples), I would like you to brainstorm a few ideas, and then chat with me about them if you like. If your initial ideas for topics are too narrow or too broad, I can help you to expand or contract them.

The following resources might help you generate ideas for a topic:

- [Marketing Science Institute's \(MSI\) current research priorities](#) Some of these are more academic in focus, but all of them were developed by MSI's member companies based on their real-world challenges.
- [JM-MSI Special Issue: From Marketing Priorities to Research Agendas](#). There are many links to articles about emerging marketing phenomena.

Some advice

Be sure to cover the following during the presentation:

- What exactly are you going to talk about? Give us an idea of where the presentation is heading before going into details.
- Why should we, as marketers, care about your topic? Explain how it is relevant to business practice.
- What background information do we need to understand what you're saying? Be sure to briefly provide any background information we need to understand something. If your topic is about how X is changing the way we will do Y in the future, don't forget to remind us how Y is done today.

Pre-reading preparation– Instructions

Case: Amperity

This is a foundational case on the digital advertising landscape, especially important now that the "cookies (i.e., third-part data) have crumbled", with profound implications to online advertising and paid media.

Task: Please use the context and data provided within the case to identify a go-to-market approach for Amperity, including product and monetization strategy. The study questions are as follows.

1. Should the company change its main value proposition and lean much more heavily into the paid digital advertising space? How?
2. Were there implications of Generative AI in this emerging area for Amperity?
3. Should Amperity go for an IPO? If so: which path offered the best foot forward (doubling down on the CDP or making extensive forays into the paid media space)?

Case: RocketFuel

The Rocketfuel is a very structured case to discuss attribution and measurement of online advertising.

Task: please use the data to answer the study questions as follows.

1. Was the advertising campaign effective? Why and how? Did additional consumers convert because of the ad campaign?
2. Was the campaign profitable? Include ROI and the costs of the control group. What machine learning methods could they have used to minimize such control costs?
3. How did the number of impressions seen by each user influence the effectiveness of advertising?

Case: BudLight

The case is a very recent perspective on a major controversy involving the creation of an online advertising that was a huge disaster for a world-famous brand.

Task: please answer the following questions.

1. How could they balance respect for conservative values with their commitment to diversity and equity?
2. How could they foresee and avoid future boycotts that could harm their business?
3. How could they recover their declining market share?
4. How could AI and machine learning be used to avoid future boycotts that could harm their business? What about when ads are produced at scale by Gen AI, such as by <https://openai.com/index/sora/> Sora (<https://openai.com/index/sora/>)?

RUBRIC – RESEARCH PRESENTATION

	Problematic	Needs work	Full points—you did great!	Wow!!!
	1 point	2 points	3 points	4 points
Relevance of topic	The topic is not relevant enough for a general marketing audience	The topic is relevant for a general marketing audience	The topic is not only highly relevant for a general marketing audience, it is also interesting in its own right	The topic is extremely interesting and relevant for a general marketing audience
Communication	The presentation was unclear or confusing at many points	There were parts of the presentation that could have been explained better, or the presentation as a whole could have been better organized	You were very effective in how you communicated with the audience, and the visuals were clear	The presentation was clear at every point, the delivery was highly polished, and everything flowed together well
Expertise	The presenters demonstrated only superficial understanding of the topic	The team demonstrated some expertise on the topic, but for some aspects of the presentation, they could have done more to master the nuances of the topic	The team understood nearly all aspects of the topic, handled questions effectively, and clearly demonstrated they had gained expertise on it	The team demonstrated an expert-level understanding of the topic.

RUBRIC – CASES

Criteria	Weight	Poor	Basic	Good	Excellent
Diagnosis: Identification of the main problems and issues	15	Understands and identifies a few of the major problems in the case study.	Understands and identifies some of the major problems in the case study.	Understands and identifies the bigger part of the key problems in the case study.	Understands and identifies all the major problems in the case study.
Literature/methods review	10	Incomplete research and associations between the issues or problems and main concepts. Relevant sources are not used.	Limited research and associations between questions or problems and main concepts. Little use of relevant sources.	Good research and documented associations between questions or problems and main concepts. Some use of relevant sources.	Great research with clear associations between questions or problems and main course concepts. Good use of relevant sources.
Analysis	25	The analysis of the main problems is incomplete.	Thorough and insightful analysis of some of the main problems.	Thorough and insightful analysis of most of the main problems.	Thorough and insightful analysis of all the main problems.
Identification of alternatives/course of action/solutions	20	Incomplete. Superficial alternatives/course of action. No evaluation method.	Some of the main problems are covered by alternatives/course of actions with a method to evaluate them.	Most of the main problems are covered by alternatives/course of actions with a method to evaluate them.	All main problems are covered by alternatives/course of actions with a method to evaluate them.
Recommendations of a course of action/solution	20	Superficial recommendations of solutions to a few of the issues or problems.	Shallow recommendations of a course of action / solutions to a few of the issues / problems.	Well thought-through recommendations of a course of action / solutions to a many of the issues / problems.	Logical well-reasoned relevant observations and recommendations of a course of action / solutions to all issues / problems.
Writing style and organization	10	There are lots of grammatical and spelling errors. Ideas are not easy to follow. There are no references. Unstructured text.	The text is somewhat unstructured and unclear. There are several grammatical or spelling errors. Some ideas are presented clearly. References are not used or irrelevant.	Contains a few grammatical or spelling errors. The bigger part of the ideas is clearly presented although the writing style is mechanical. References are utilized. Overall well written, with occasional typos, or inaccuracies.	Writing is totally free of spelling and grammar errors. Concise clear and creative presentation of ideas. Text is clear, structured and concise, even if more (or less) details could improve the readability. Tables and Figures are self-explanatory and timely used. Properly referenced.
